Hyderabad, India

Summary

Java Backend Engineer with 2+ years of experience building cloud-native Spring Boot microservices, Kafka event-driven systems, and production REST APIs. Sole-engineered a production vehicle-intake backend with 12+ REST endpoints across Dev, Stage, and Production on AWS EC2 and S3, processing 1,500–2,000 vehicle records daily. Led a zero-downtime Java 8 to 17 migration across 8 production microservices, including Spring Boot, Security, and Data JPA upgrades and Kubernetes containerization.

Technical Skills

Languages: Java 8–21, SQL, Object-Oriented Programming (OOP), Design Patterns, Data Structures and Algorithms
Frameworks: Spring Boot, Spring MVC, Spring Cloud, Spring Data JPA, Hibernate, Spring Security, Spring cloud
Architecture: Microservices, REST APIs, Event-Driven Architecture, Distributed Systems
Messaging & Caching: Apache Kafka (KRaft), Redis
Cloud & DevOps: AWS EC2, AWS S3, Docker, Kubernetes, Harness CI/CD, SonarQube
Databases: PostgreSQL, MySQL
Security & Resilience: JWT, OAuth2, RBAC, Resilience4j(Circuit Breaker, Retry), Eureka, Spring Cloud Gateway
Testing & Tools: JUnit 5, Mockito, Git, Swagger/openAPI, Agile, Scrum, GitHub Copilot

Experience

Java Backend Engineer Oct 2024 – Present
Genpact — CDK Global Account *Hyderabad, India*

- Sole-engineered a production vehicle-intake REST backend with 12+ endpoints, deployed across Dev, Stage, and Production on AWS EC2 with S3-based artifact storage; processes 1,500–2,000 vehicle records daily for dealership operations through frontend scanner integration.
- Led a zero-downtime Java 8 to 17 migration across 8 production microservices, upgrading Spring Boot, Spring Security, and Spring Data JPA; used GitHub Copilot for deprecated API detection and test generation, and containerized services for Kubernetes deployment.
- Owned the Harness CI/CD lifecycle for 8 microservices, enforcing SonarQube quality gates and JUnit 5 coverage thresholds as part of sprint delivery.
- Implemented stateless JWT authentication, OAuth2 authorization, and role-based access control across microservice endpoints; participated in peer code reviews within an 8–10 member backend engineering team.

Projects

Real-Time Event Processing System | *Java 21, Apache Kafka KRaft, Spring Data JPA, MySQL* | **GitHub Demo**

- Built a Kafka producer-consumer pipeline that streams live Wikimedia Server-Sent Events (SSE) into MySQL for downstream analytics and event processing.
- Implemented asynchronous event consumption and persistence using Apache Kafka and Spring Data JPA to process continuously arriving real-time events.

ExpenseCore | *Java 17, Spring Boot 3, Spring Security, Redis, MySQL* | **GitHub Demo**

- Developed a Spring Boot expense-management backend with stateless JWT authentication and Redis-based token blacklisting using SHA-256 hashing and TTL expiration.
- Implemented fully database-driven role-based access control with correlation-ID logging using SLF4J and MDC for request tracing across backend operations.

Education

Vaagdevi College of Engineering 2020 – 2024
B.Tech in Computer Science Engineering, AI & ML Specialization — CGPA: 8.6/10.0 *Warangal, India*

Certifications

AWS Certified AI Practitioner (AWS)
AWS Cloud Foundations (AWS Academy)
Java Foundations Certified Junior Associate (Oracle Academy)
Generative AI Leader (Google Cloud)
